Lucknow, Uttar Pradesh, India | +91 9129835456 | [LinkedIn](#) | [GitHub](#) | adnanahmadansari002@gmail.com

Profile Summary

Backend-focused Computer Science undergraduate with hands-on experience building scalable microservices, distributed systems, and event-driven architectures using Java/Spring Boot, Kafka, Redis, and AWS. Skilled in API development and testing (Postman/Swagger), database technologies (MySQL, PostgreSQL, Redis), and cloud fundamentals. Strong foundation in OOP, SOLID principles, Data Structures & Algorithms, multithreading, and system design. Eager to contribute to platform infrastructure, performance testing, and scalable systems engineering.

Technical Skills

Languages: Java (OOP, Collections, Generics, Multithreading, Exception Handling, JMM & GC), SQL, Python, JavaScript
Backend: Spring Boot, Spring Framework, Spring Security, RESTful APIs, Microservices, JWT, OAuth2, SOLID & DRY Principles
Testing & Quality: JUnit, Mockito, Postman, Swagger (OpenAPI), SonarQube, PowerMock
System Design: Redis (Caching), Apache Kafka (Messaging), API Gateway, Eureka Server, Event-Driven Architecture
Databases: MySQL, PostgreSQL, MongoDB (NoSQL) – SQL & NoSQL data modelling
Cloud & DevOps: AWS (EC2, S3, IAM, Lambda basics), Git, GitHub, CI/CD Pipelines, Docker (basics), Maven
Monitoring/Logging: SLF4J, Log4j, Logback
Frontend: React.js, HTML, CSS, Tailwind CSS
Core Concepts: Data Structures & Algorithms, DBMS, Computer Networks, Operating Systems

Projects

AI-Powered Fitness Application | *Spring Boot, React.js, Kafka, Keycloak, PostgreSQL, Gemini API* | [Link](#) Apr 2026 – May 2026
– Developed a scalable full-stack microservices platform using Spring Boot, React.js, Spring Cloud, Kafka, Keycloak, PostgreSQL/MySQL, and Gemini API following SOLID design principles for secure enterprise application management.
– Implemented API Gateway, Eureka Server, centralized config management, REST APIs, role-based authentication (JWT/OAuth2), and a responsive React dashboard.
– Designed a distributed microservices architecture with proper exception handling to improve scalability, secure communication, modular deployment, and maintainability.
– Integrated Google Gemini API to provide AI-powered recommendations, smart insights, and automated assistance, reducing manual effort by 40%.
– Enhanced performance and reliability through real-time Kafka messaging and optimized architecture supporting 500+ concurrent users; used Postman/Swagger for API testing and documentation.

Journal Management System (Production-Grade Backend) | *Spring Boot, Kafka, Redis, JWT, OAuth2* | [Link](#) Jan 2025 – Mar 2026
– Developed secure, well-documented REST APIs using Spring Boot with JWT & OAuth2 following clean coding standards, reducing unauthorized access risk by ~90%.
– Integrated Redis in-memory caching, improving API response time by ~40% under load.
– Implemented Kafka-based event-driven architecture for asynchronous processing, scalability, and decoupled service communication.
– Designed a modular, layered backend architecture (Controller-Service-Repository) improving maintainability and testability; wrote JUnit & Mockito unit tests for core service logic.
– Built system capable of handling concurrent users with low latency; used SLF4J/Logback for structured logging and debugging.

Education

Dr. A.P.J. Abdul Kalam Technical University <i>B.Tech in Computer Science and Engineering — CGPA: 7.5/10</i>	Lucknow, UP 2023 – 2027
St. Xavier's Inter College <i>Intermediate (Class XII) – 69/100</i>	Jaunpur, UP 2023

Achievements

- Top 10 Rank – Smart India Hackathon 2025 (Pre-Qualifier Round)
- GeeksforGeeks Coding Score: 126+ – Consistent practice in Data Structures & Algorithms and problem-solving

Certifications

- Oracle Certified: AI Foundations
- Lernovate Certified: Soft Skills
